1. ACRONYMS & REFERENCE DOCUMENTS

1.1. Acronyms

Acronym	Description
NRC	National Rocketry Competition
RS	Requirement Specification
PDR	Preliminary Design Review
CDR	Critical Design Review
MR	Manufacturing Review
FRR	Flight Readiness Review
MRC	Midland Rocketry Club

1.2. Reference Documents

1.2.1. Competition Documents

There are two other documents related to the competition to make a total of **three regulatory documents**. The three documents are as follows:

ID	Document	Description
NRC-RB	Rulebook	Outlines the overall competition rules, funding, team structures and so on - the competition logistics.
NRC-SOW	Statement of Work (This Document)	Outlines the main deliverables teams shall be expected to deliver - the competition project requirements.
NRC-RS	Requirements Specification	Outlines the technical requirements the rocket must be designed to meet

1.2.2. Useful Reference Documents

No.	Document	Description
1	ECSS-M-ST-10C Rev. 1	Space project management - Project planning and implementation
2	ECSS-S-ST-00-01C	Glossary of Terms - A list of commonly used terms in ECSS documents

2. Introduction

The National Rocketry Competition (NRC) challenges student teams to design, construct and operate a rocket for an analogue space mission. Students create a rocket concept, trade off performance parameters and pass through a rigorous review process. The competition aims to:

1. Challenge students to perform a complex, systems engineering task of the development of a vehicle to a set of real space mission requirements;
2. Enable students to apply taught technical skills and learn new ones relevant to a job in the space industry, through a practical project;
3. Provide students with an opportunity to develop and practise other important and transferable skills, such as teamwork, leadership and project management;
4. Foster interest in the activities of the space sector, especially in space engineering.

2.1. Scope

This document reports expected activities and deliverables within the scope of the National Rocketry Competition for 2025–2026. This document captures the mission, which teams are expected to focus on throughout the year, with context provided behind the mission.

2.2. Organisations Involved

2.2.1. UK Students for the Exploration and Development of Space (UKSEDS)

UKSEDS is the UK's national student and early professional space charity, founded in 1988. As a registered charity with 4,600+ current members, 40+ university branches, and 20,000+ followers across social media platforms, UKSEDS provides a nationwide platform for skills development, networking, and career advancement in the space sector. As a dedicated team of 100+ student and early-career volunteers, UKSEDS delivers national and regional events and projects, including conferences such as the National Student Space Conference (NSSC), skills workshops, outreach programs, five annual national competitions spanning rocketry, rovers, satellites and ISAM, and more. Through these initiatives, UKSEDS works to inspire, upskill and enable the next generation of the UK space workforce.

Our partner organisation, www.SpaceCareers.uk showcases students and recent graduates with opportunities within the space sector, and has been hailed as “a crucial service to thousands of people across the country” by the former Prime Minister, Theresa May.

3. STATEMENT OF WORK OVERVIEW

This section provides a description of all the major components of the competition, and includes references to additional material where necessary.

3.1. Mission Background and Scenario

Introducing the 2025–26 UKSEDS National Rocketry Championship (NRC). This year's competition has been designed with a systems engineering theme simulating how projects are often managed in the space industry.

An important aspect of designing a launch vehicle is consideration for interfacing with a customer payload. For this year's iteration of NRC teams are tasked to design, build and test a Rocket Launch Vehicle that shall carry a 'Customer Payload' provided by UKSEDS as well as a 'Rideshare Payload' that is designed, built and tested by the participating team. Team designs shall meet the requirements as described in the Requirement Specification (RS), which includes standards that rocket designs shall meet along with requirements to highlight customer interfaces and payloads that teams need to meet. On the Launch day, your rocket will be expected to perform the following:

- **Meet Technical Criteria:**

The Rocket shall meet the technical requirements and specifications outlined in the NRC RS document.

- **Launch:**

The Rocket shall be able to Launch on the command from the RSO on-site.

- **Reach Apogee:**

The Rocket shall target to reach an apogee of 2200ft. The teams are awarded points for reaching this target as accurately as possible as outlined in the MRD.

- **Recovery:**

The rocket must be recovered in a condition with minimal damage.

Teams will need to pass through various design stages to be able to launch, and are expected to follow common engineering practices and standards to create a successful design. Examples of industry standards are the European Space Agency's European Cooperation for Space Standardization (ECSS), NASA's General Environmental Verification Specification (GEVS) or the International Standards Organization (ISO). Standards are widely accepted guidelines that standardise how things should be designed or carried out. There are standards for the margin to use on a mass budget, how to carry out structural finite element modelling or the type of environmental tests to carry out on your equipment. Teams are encouraged to

consider industry standards and adapt them to their team and design in a productive manner to give them the best advantage.

3.2. Mission Objectives

Teams will be provided with a Requirements Specification Document, which includes all requirements that teams will need to follow throughout the competition, along with a list of requirements related to a **customer payload**. Teams will be tasked to design a rocket that meets these requirements and must pass through design stages to get to launch. Further, teams will have to design their own payload, referred to as a **rideshare payload**.

The Customer Payload, designed by UKSEDS, is intended to give teams the opportunity to experience integrating an external customer payload into their design, building valuable skills in systems engineering. As outlined in the requirement specification, the payload is accompanied by a set of requirements that teams are required to meet. Performance will be assessed not only on the successful fulfillment of these requirements, but also on the team's strategies to implement the payload into their designs.

The purpose of the rideshare payload is to give teams the freedom to define their own requirements and objectives. Teams are encouraged to be creative and innovative with their rideshare payload mission, using it as an opportunity to demonstrate teamwork, coordination, and technical expertise. Specific guidelines and baseline requirements for the Rideshare Payload are detailed in the requirement specification.

3.3. Team Requirements

Each team may have a **maximum of 10 members and minimum of 4**. A maximum of **6 teams is allowed to enter per organisation** (i.e per university society) and **all members of the team must have a [UKSEDS membership](#)**. Changes to teams should be communicated to the UKSEDS through the **mandatory** monthly report documents (Discussed in [Section 3.4.2](#)) and optionally to the UKSEDS point of contact. Please note that the last time to make changes/updates regarding your team and team members is **30 days¹ before the competition**.

Teams must do a significant majority of the work submitted throughout the competition. Teams found reusing work from previous year entries or have members outside the registered team contribute to their designs will be considered plagiarising and will be penalised at the UKSEDS organisers discretion.

¹ Subject to change – Teams invited to competition day will need to register details of each individual. After registration, only members which have sent their details will be allowed

3.4. Description of Work

3.4.1. Timeline

The project shall follow the **ESA Project Lifecycle structure** as shown in Figure SOW-1. It should be noted that phase A relates to analysing the feasibility of a mission, which has been omitted from this competition's requirements, and should be treated to be performed by the UKSEDS organisation team before competition launch.

Figure SOW-1 - NRC 2025/26 Timeline

Each Phase, with the exception of phase D, is completed through the submission of a document, detailing the design of your system. Further details of the deliverables can be found in the following sections with a summary shown in the table below. Templates for each deliverable will be made available on the competition website for guidance.

Table SOW-1: Preliminary Competition Schedule

Deliverable	Due Date ²
Monthly Report	First Monday of every month
PDR Submission	28th November 2025
CDR Submission	19th February 2026
Manufacturing Review	10th April 2026
Public Engagement Submission	2nd June 2026
Flight Readiness Review	2nd June 2026
Competition Day	Primary Day: 17th June Backup Day: 24th June ³ .

² Dates are subject to change and will be communicated accordingly to participants.

³ If forced to swap to backup day, participants shall be given a minimum of 2 working days notice..

3.4.2. Monthly Reports

Teams will need to fill out a single page report and email the UKSEDS Point of Contact. Reports are to give updates on progress and highlight issues or concerns within the team (technical, management, etc) and are a mandatory submission. The report is due on **the first Monday of every month**. If a monthly report is not received, it will be assumed the team has dropped out of the competition. The template can be found [here](#), or on the website.

In the reports, teams will describe: work achieved in the previous month, work to be done in next month, and challenges/issues/concerns that the team would like to raise with UKSEDS organisers. The main purpose of this report is to enforce communication between teams and UKSEDS organisers. The template provided gives more detail, and teams are encouraged to email the UKSEDS organisers with any questions they may have.

3.4.3. Public Engagement Submission

Throughout the year, your team may take part in activities to showcase the work that has been done. Further, teams may also take part in education activities, such as workshops, lectures or school visits, to talk about Space, Engineering or STEM. Aligning with the European Space Agency, UKSEDS also believes [Space is for All](#) and actively encourages teams to spend some time engaging with the community around. The team determined to have the best public engagement will win **50 points** and their **own trophy presented** at competition day. More information can be found in [Appendix SOW-1: Public Engagement Award](#).

DUE DATE: 2nd of June, 2026

3.4.4. Phase B – Preliminary Definition

The main deliverable at the end of Feasibility & Preliminary Definition Stage is the **Preliminary Design Review (PDR)**. This is normally held at the end of Phase B of the project process defined in the space project management standard (ECSS-M-ST-10C Rev. 1). The following excerpt is taken directly from this document, and describes what is expected in a PDR.

The deliverable expected at this stage is the **Preliminary Design Review (PDR)**. The primary objectives of the PDR are:

- Verification of the preliminary design of the selected concept and technical solutions against project and system requirements
- Release of management, engineering and product assurance plans
- Release of product tree, work breakdown structure and specification tree
- Release of the verification plan (including model philosophy)

The PDR will consist of a **10 minute** recorded presentation. It is advised that teams get as many individuals from their teams to present as possible. Within the presentation, teams are expected to show:

- Table with team and management structure
- GANTT chart with competition and internal deadlines
- Highlight design concept
- Initial analysis of design to showcase feasibility
- Requirements Compliance

Categories which teams will be judged on for their PDR will be:

- Quality of launch vehicle design
- Communication of design
- Simulation data
- Quality of rideshare payload design
- Systems Engineering
- Project Management
- Testing
- Media

DUE DATE: 28th November 2025

3.4.5. Phase C – Detailed Definition

The deliverable at the end of the Detailed Definition Stage is the Critical Design Review (CDR). It is normally carried out at the end of Phase C (detailed definition) of a project, and according to ECSS-M-ST-10C Rev. 1 should address the following objectives:

The primary objectives of the CDR are:

- Assess the qualification and validation status of the critical processes and their readiness for deployment in phase D
- Confirm compatibility with external interfaces
- Release the final rocket design
- Release assembly, integration and test planning
- Release flight hardware/software manufacturing, assembly and testing

The CDR will consist of a **30 page** document, excluding cover page, reference, and appendices. Areas teams are expected to include within the report are:

- Table showing team structure and management
- Updated GANTT chart with competition and internal deadlines
- In depth analysis verifying design will work. (Flight simulations, FEA, etc)
- CAD Models
- Requirement Compliance
- System Architecture Diagram

Categories which teams will be marked on for their CDR will be:

- Quality of launch vehicle design
- Communication of design
- Simulation Data
- Quality of rideshare payload design
- Systems Engineering
- Project Management
- Testing
- Media

DUE DATE: 19th February 2026

3.4.6. Phase D – Build, Testing & Qualification

Upon completion of the CDR teams shall be able to begin the final build of their rockets. Following this, teams will need to demonstrate the key features of their rocket in a Manufacturing Review (MR) and a Flight Readiness Review (FRR). The purpose of the MR is for teams to demonstrate the initial manufacturing, prototype development, and testing teams have performed. The FRR is meant to serve as a safety review which is used to verify that the rocket meets safety requirements and is ready to launch. **The Manufacturing process is often underestimated in the amount of time it can take and therefore should be planned accordingly by the team to maximise their efficiency, given the deadline.**

3.4.6.1. Manufacturing Review

The manufacturing will consist of a **10 minute** recorded presentation. Areas that teams are tasked with demonstrating the status of their launch vehicle with an updated status of the Launch Vehicle. Teams should also highlight what manufacturing has been done, what manufacturing remains and what qualification and testing is planned on the rocket. Teams should also remember to update and present their requirements compliance documents. It is important to also highlight how the manufacturing resources teams had available impacted the design of their rocket.

Areas that teams will be marked on in the MR are:

- Quality of launch vehicle manufacture
- Communication of manufacture
- Testing
- Media
- Quality of rideshare payload manufacture
- Systems Engineering
- Project Management
- Simulation Data

DUE DATE: 19th February 2026

3.4.6.2. Flight Readiness Review

The flight readiness review will be a 10-15 slide power point slide deck. Within this slide deck, teams should include pictures and text to showcase key critical safety features of their design as outlined in NRC RS-001/ Versions Henceforth. **If a rocket is deemed unsafe or unfinished, the team will not be allowed to fly their rocket at competition day.**

DUE DATE: 2nd June 2026

3.4.7. Phase E – Launch Day

On Launch day, a health and safety briefing will be provided **which all team members must attend**. Teams will be given a launch slot with an allotted time to set up, launch and retrieve their rockets. In previous years, the competition has been hosted by Midlands Rocketry Club (MRC), A more detailed Launch Day Information pack will be provided closer to the day⁴. A description key site locations is provided below:

Paddock

Registration is located here along with a workshop, exhibition and food court. There will also be a help desk, toilets and a rocket storage area.

Flight Registration & First Aid

All teams should report to the flight registration area no later than 30 minutes before their launch window. In the unlikely event of any injuries, first aid supplies will be located here.

Motor Prep Area

This is where motors will be stored throughout the day. Once teams have registered their flight they will be able to collect and prepare their motor here under the supervision of our experts.

Spectator Area

This is where all participants and spectators should stay within when watching launches. Do not leave this area unless directly instructed to do so by a UKSEDS volunteer or range safety officer.

Parking

Parking is available to all visitors. We can accommodate both cars and buses. Please remember to respect the 5mph limit on the farm.

If you have any accessibility issues and think you will require assistance please email us at rocketry@ukseds.org.

DUE DATE: 17th June 2026 (Primary), 24th June 2026 (Back-up day if needed due to prevailing weather conditions, 2 days notice will be given in case of cancellation of primary day)

3.4.8. Scoring

Teams will be scored in two main areas:

- Deliverables
- Competition day

⁴ Venue is subject to change and teams will be notified accordingly.

There is an even split in the marks between the two meaning that a team's overall mark is dependent on their work throughout the year as well as the competition day. The winning team is likely to excel in both areas.

3.4.8.1. Scoring Table Breakdown

Criteria	Points
Deliverables	500
Preliminary Design Review	200
Critical Design Review	200
Manufacturing Review	100
Competition day	500
Team's preparedness	25
Customer Payload integration	25
Target altitude	200
Recovery system deployment	50
Successful recovery with minimal damage ⁵	50
Rideshare payload data	100
Rideshare payload innovation	50
Total	1000

3.4.8.2. Preliminary Design Review

Criteria	Percentage
Quality of launch vehicle design	20
Communication of design	20
Simulation data	20

⁵ Minimal damage shall be defined as being able to be flown again on the same day with minor repairs and effectively 'motor ready'.

Quality of rideshare payload design	10
Systems engineering	10
Project management	10
Testing	5
Media	5
Total	100

3.4.8.3. Critical Design Review

Criteria	Percentage
Quality of launch vehicle design	15
Communication of design	15
Simulation data	15
Quality of rideshare payload design	10
Systems engineering	10
Project management	10
Manufacturing techniques	10
Testing	10
Media	5
Total	100

3.4.8.4. Manufacturing Review

Criteria	Percentage
Quality of launch vehicle manufacture	20
Communication of manufacture	15
Testing	15
Media	15
Quality of rideshare payload manufacture	10
Systems engineering	10
Project management	10
Simulation data	5
Total	100

3.4.8.5. Altitude Marks

A graph showing the distribution of marks vs altitude can be found below. Please note, heavy penalisation shall occur above 3000ft as this is the dual-deployment limit. As the Notice To Airmen (NOTAM) limit for Midlands Rocketry Club is 3500ft, a mark of 0 shall be given to any teams that breach this.

Figure SOW-2 - Altitude vs Marks distribution

3.5. Rocket Motor

Please note, that due to substantial issues with motor supply in the UK over the last few years, **all motors for the competition shall be ordered by UKSEDS on behalf of the teams**. Furthermore, owing to the supply issues, UKSEDS cannot guarantee the availability of all Flame types, motors types or grains.

A non-refundable motor fee of £30 will be charged to all teams before the PDR. The exact deadline will be no later than 1 week before the PDR and will be shared with the teams well in advance. This will cover the cost of 1 motor per team which will be made available to teams on the NRC Competition Day 2026. If a team decides to forfeit the competition, the motor will still be available for use to the team for the following year's NRC Launch Day.

Rocket motors are prone to failure the longer they sit on the shelf and are typically made to order. Thus, after a period of one year has elapsed from the Launch day, the motors automatically lapse to UKSEDS ownership as a bursary for other teams. If a team misses the competition day, UKSEDS and UKSEDS partners cannot guarantee the availability of the motors outside of the competition day.

3.6. Extensions

If your team requires an extension, contact your competition point of contact. Please state clearly the reason for your request for an extension, at least 7 days before the submissions deadline. Note that extensions are considered on a case-by-case basis and submitting a request does not automatically guarantee an extension, so it is advised to continue working towards the original submission until you have received a verdict. Please be aware that providing an extension is at the discretion of UKSEDS. Unless explicitly stated, please assume that if the extension has been granted, it is an extension of 7 days from the original submission date.

4. CODE OF CONDUCT

In the code of conduct, participants refers to individuals or teams that are participating in a UKSEDS organised competition. By doing so, participants accept to follow the code of conduct as outlined below. Teams or individuals who are found to not follow the code of conduct, will be removed from participation with the potential penalty to be removed from further competition cycles.

1. Plagiarism through Artificial Intelligence

Participants agree to not use any form of Artificial Intelligence in the process of producing any of the deliverables. Artificial Intelligence cannot be used to determine design decisions or determine the design process the team uses. Further, Large Language Models (LLMs) will not be used in the making of deliverables or producing text to be placed within the deliverables.

Teams may use Artificial Intelligence as part of their design, i.e. a computer based vision detection system which uses Artificial Intelligence for object tracking.

Participants should reach out to UKSEDS organisers to address any questions or concerns over Artificial Intelligence use.

2. Plagiarism through Reuse of Previous Work

The purpose of the competition is to give students the opportunity to develop their technical, team working, and project management skills. Participants agree to not reuse material from previous competitions and correctly reference and credit work. Teams are allowed to take inspiration from previous years, but must ultimately produce work that is their own. Work which is considered plagiarised will be investigated and a decision will be made by UKSEDS. Plagiarism could result in heavy penalisation or disqualification, and the decision is at the discretion of UKSEDS.

Participants agree that a significant majority of the work submitted was produced from members registered in the UKSEDS competition. Members not registered within the team are allowed to provide feedback and reviews to designs, but play no active role in the decision making being the design or analysis performed. Participants agree to contact UKSEDS organisers if they have any questions or concerns about what is allowed.

3. Conflict of Interest

Participants agree to not compete while being an active member of the UKSEDS Competitions team. Participants which are involved in UKSEDS in any capacity, even if not within the UKSEDS Competitions Team, , shall notify UKSEDS prior to competing, and a decision will be made regarding the conflict of interest. Any participant which is found to be a UKSEDS volunteer who has not declared the conflict of interest will be removed from both the competition and UKSEDS. The team they participated in will also be disqualified from the competition, with the potential to be disqualified for further competitions at the discretion of UKSEDS.

Participants should avoid engaging in any activities or relationships that could create a conflict of interest with their role within the competition. This includes personal or financial relationships that may compromise their objectivity, impartiality, or decision-making processes related to the organisation. Any conflict of interest should be notified to UKSEDS and clearly disclosed in the conflict of interest declaration within the competition registration form.

4. Unfair Advantage

UKSEDS organisers agree to share any information with all teams at the same time, or within acceptable margin, such that not one team or group of teams get an unfair advantage. Participants agree to not seek information from UKSEDS unofficially, and participants that are found to do so can be subject to the same consequences laid out in **point 3**.

5. Respectful and Inclusive Behavior:

All participants are expected to be friendly, kind, and respectful at all times, and to help create a welcoming and inclusive environment for everyone involved. Discrimination, harassment, bullying, exclusionary, or disrespectful behaviour will not be tolerated. This includes, but is not limited to: threats of violence, insubordination, discriminatory, excessive, or inappropriate jokes or language, sharing sexually explicit or violent material, personal insults (especially those using racist, sexist, or otherwise offensive terms), unwelcome sexual attention, posting others' personal information, or encouraging any of these behaviours. Any complaints or concerns raised by UKSEDS, participants, or external parties will be handled in accordance with UKSEDS policies, which may include removal.

6. Social Media and Public Communications:

When discussing or representing UKSEDS on social media platforms or in public communications, please remember to maintain a positive and respectful tone. This includes being mindful of the content posted, respecting the privacy and confidentiality of others, and promoting a positive image of the organisation. Avoid sharing confidential, personal or sensitive information.

7. Social Events and Gatherings:

During in-person events hosted by UKSEDS (e.g. competition day), participants are expected to conduct themselves in a respectful and responsible manner, adhering to UKSEDS guidelines.

8. Professionalism and Dress Code:

Participants are expected to adhere to a professional and appropriate dress code for in-person UKSEDS organised events. Dress neatly and modestly, maintaining cleanliness and good personal hygiene. Dress codes may vary depending on the nature of the activity.

9. Safety and Security:

Your safety and the safety of others are of utmost importance to us. Follow all safety guidelines, procedures, and instructions provided by UKSEDS or designated safety officer. If you notice any potential hazards or unsafe conditions, please report them immediately.

10. Compliance with Laws and Regulations:

Participants are expected to comply with all applicable laws, regulations, and policies. This includes but is not limited to health and safety regulations, privacy laws,

11. Integrity

Participants must avoid placing themselves under any obligation to people or organisations that might try inappropriately to influence them in their work. They should not act or take decisions in order to gain financial or other material benefits for themselves, their family, or their friends. They must declare and resolve any interests and relationships.

12. Accountability

Participants are accountable for their decisions and actions and must submit themselves if any negative impacts occur towards any stakeholder of UKSEDS competitions.

13. Openness

Participants should be open about any situations or decisions which could have an impact on the competition, other participants, or UKSEDS volunteer members. This can range from engineering risks to public engagement relating to the competitions. UKSEDS organisers shall communicate information in a fair manner across all teams so that no single team gains an unfair advantage. Further, any information which could impact the teams ability to compete in competitions shall be communicated in a timely manner.

14. Honesty

Participants should be truthful and exhibit these principles in their own behaviour and treat others with respect. They should actively promote and robustly support the principles and challenge poor behaviour wherever it occurs.

Appendix SOW-1: Public Engagement Award

One of the most important parts of our roles in this industry is public engagement. Whether that's inspiring future generations to look at STEM areas for career opportunities or to inform the general public on the importance of STEM. Therefore, we want to encourage teams to perform public engagement through their entry into the competition. Each team has a **mandatory** submission alongside their FRR outlining a summary of their public engagement activities with examples. This shall take the form of a video up to 5 minutes in length, along with an evidence table with any relevant links. Teams shall **not** be penalised for having made no efforts towards the public engagement prize, however a submission stating this is still required.

What should be in the video:

Teams should describe their public engagement goal - whether that's gaining funding, promoting their society, or maybe educating people about space. Teams should then state who their intended audience(s) is. Teams should also explain any content they've produced and how it aligns with their goal, as well as any activities that have been carried out. **Assessment for the public engagement prize shall then be based on the following criteria based on the evidence provided in teams' submission:**

Criteria	Description	Scored out of
Activity Breadth & frequency.	How many different avenues have been taken? e.g. running an Instagram page, hosting in person events at university, going into schools to do talks. How often has an activity been done? e.g. hosting multiple events, frequent posting	5
Quality of activities	Information provided and clarity of communication. How appropriate is it for the intended audience? How engaging is the content? How directly relevant is it to the team? Are activities directly driven by the team?	10
Quality of submission	How well have the team presented their engagement efforts and how clearly have they summarised what they have done? Does the evidence table provide useful links to back up what they have done?	3

What counts as an 'activity'?

Anything! As long as teams can justify how it is relevant to their goal anything goes - anything from Instagram posts and TikToks to hosting society talks and going into schools. Below are examples of two teams' submission for the Public Engagement Award and how they would be marked:

1. *Team A is aiming to promote their university space society to fellow students. They have an Instagram page with photos of their rocket and project updates to show off the work they've done to encourage people to check out the society. In their submission they show example posts from their Instagram and describe generally how the posts are primarily to show off the work they've done. In their evidence table they link to their Instagram page.*

Breadth and frequency of activities: 2/5 - they only have an Instagram page but have evidenced a range of posts from the design updates of the rocket, how they do project management to showing off rocket testing .

Quality of activities: 4/10 - information in Instagram posts is clearly presented and clearly intended for university students. An appropriate level of detail is provided in posts. Content is limited in how engaging it is. Directly relevant to the team with them showing off their own journey, and the team clearly run the Instagram page themselves and make all the content.

Quality of submission: 3/3

2. *Team B is aiming to promote working in the space industry and working in STEM in general. Their intended audiences are primary school children and university students.*

They have registered with STEM UK and have hosted two events in their local primary school. Firstly, they had a talk on space as well as showing off their rocket and how it works. They then had an interactive workshop where they got the children to make a model car. At their university, they have hosted similar events such as talking about their rocket and collaborating with other societies to host an Arduino coding workshop. Their Instagram is managed by a wider space society.

In their submission, they present Instagram posts, pictures of talks and marketing of said events. They also show pictures from the primary school workshop with evidence of presentation slides, instructions, and the model cars that were made. They briefly describe their engagement approach, events they've hosted throughout the year, how they planned and catered their events and also describe feedback and comments from the schools. In their evidence table they provide all relevant links to back up what they've done.

Breadth and frequency of activities: 5/5 - they have done multiple events for different audiences as well as promoting their events and team on Instagram. They have produced a range of content from workshops to marketing material.

Quality of activities: 10/10 - All content is well thought out, appropriate for intended audiences and they have taken steps to make content engaging (in person events, Instagram votes to influence their rocket appearance, etc) Content ranges from being directly relevant to the team to also having a wider scope of the space industry. Although their Instagram was handled by people not in the team, it is clear that the team must have been involved from the detail provided of their rocket - the team is also clearly at hosted events, as well as having organised and planned the events.

Quality of submission: 3/3
