

- Plug in $\rightarrow$ then press Reset, this sets altitude to 0 $\rightarrow$ arm it
 - screw customers into launch vehicle adapter
 - put in as one module, screw in top. , be careful its on the rods
-

After landing:

- yank everything out, hand over customers, pictures of screen, max alt. take apart rideshare and take out microsd card.
- plug in ^{microsd} card into computer, with adapter, outputs csv file with data,
 - excel ^{or python}: altitude, time and DH22 temp, time graphs, take photo
